

Ice Climbing at the Salmon River Falls Unique Area

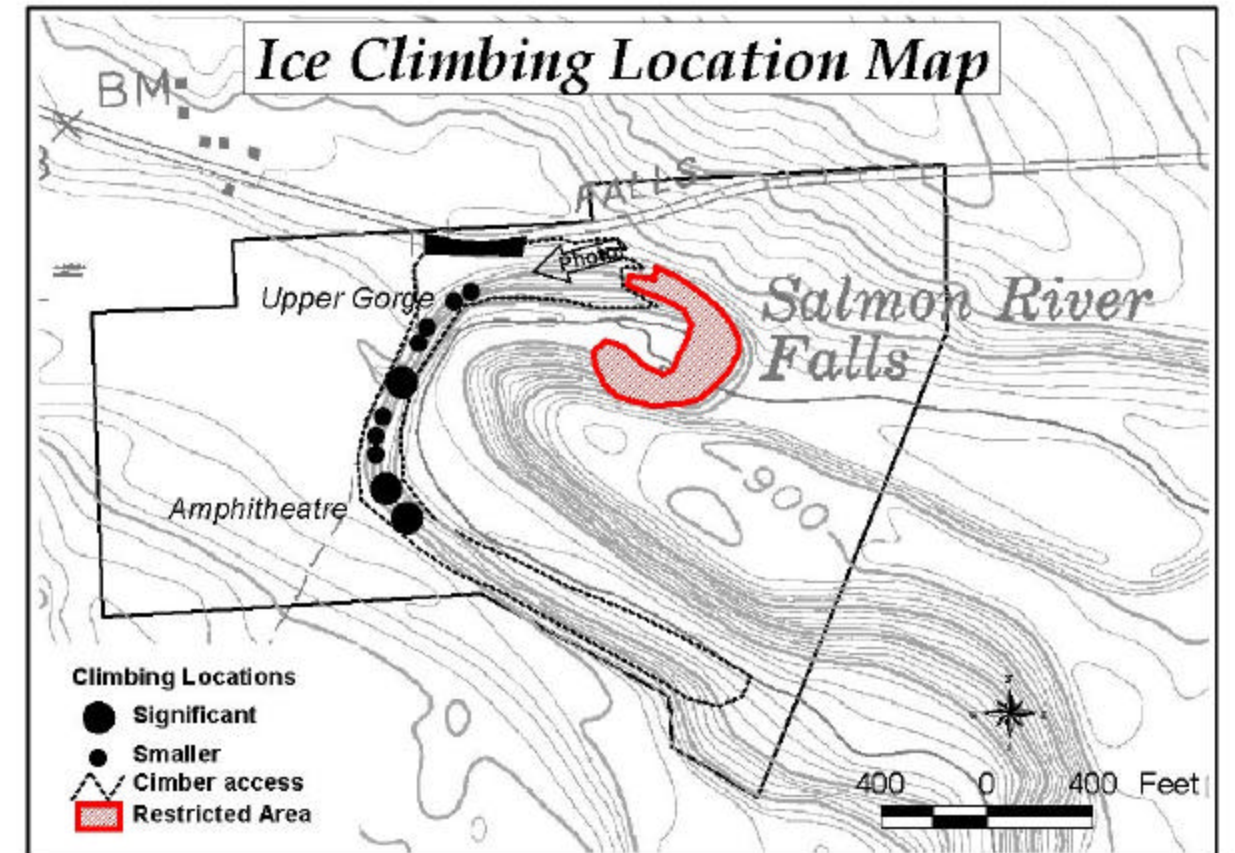

All Ice Climbers must Register and abide by all restrictions while ice climbing.

Enjoy your Visit!

Important Information for Climbers

Threatened Plants: The birds-eye primrose and yellow mountain saxifrage are two threatened plant species, which grow and live on the steep cliffs and rock ledges within the gorge. It is important for ice climbers to be aware of these plants and climb in areas with ice formations in order to minimize disturbance to the plants and their habitat.

Fast Rising Water: The Salmon River Reservoir Dam is located one mile upstream from the Fall's. In the event of a high water release there is little notice to fast rising water. If you notice the water rising, move to higher ground and **DO NOT** attempt to cross the river!

Ice Climbing Guidelines & Area Restrictions:

- Climbing is prohibited without registration.
- Climbing prohibited in restricted areas or on the face of the Fall's.
- Conventional climbing gear required.
- Climbing in areas without ice is prohibited.
- Conventional rock climbing is prohibited.
